RafasConquest Commands

Every command in the mod and what it does. Version 0.0.2 (build 0318f94).

> **Reading this guide.** `<angle>` arguments are required; `[square]` arguments are optional. Names with spaces must be in quotes, e.g. `"Grey Hollow"`. Tab completion suggests nation and general names.
> **Permissions.** Everything under `/pve` needs operator level 2 (cheats on in single player). `/council` is open to every player.

Wars and politics

`/pve politics`	Reports the wars under way (each side, the title fought for, the county under attack, counties taken, the armies and where they stand), the alliances, the conquests, and the latest news.
`/pve politics day [days]`	Runs the nations' daily politics now, 1 day by default or up to 60: decisions to declare war, raise armies, sue for peace, recover the dead, and truces. The in-game clock does not move.
`/pve politics war <attacker> <defender> [attackerGeneral [defenderGeneral]]`	Forces a war between two nations. The attacker picks its own goal (a county or duchy of the defender's, contiguous with its land where it can). Optionally name each side's general from its characters, or `best` for its best at war; without one, the battle picks its best.
`/pve politics muster finish [nation]`	Ends mustering for every army still mustering, or only the armies on the sides that nation fights for. They march at once. Clears the muster countdown bar.
`/pve politics muster field [nation]`	Puts both armies of every war, or only that nation's wars, straight onto their battle site, done mustering. They fight within about 5 seconds: for real if a player is within 400 blocks, otherwise the result is calculated. Wars where a side has no army yet are skipped.
`/pve muster`	Answers your nation's call to arms: teleports you to your side's army, at its muster place or on the march, and you go with it into battle (you are brought behind your lines when it fights). You must serve the nation (have enlisted).

> **Recruiter option: Go to the war camp.** Not a command, but related: when your nation is at war, its recruiters offer to send you to the war camp. If the battle is being fought you arrive at your side's command tent; otherwise behind your lines on the battlefield, mustered with the army. To fight a war's battle yourself, go to the camp first, then run `/pve politics muster field`.

Your character in battle

`/pve rank`	Shows your rank and how many soldiers you lead in battle.
`/pve rank set <player> <1–8>`	Sets a player's rank: 1 Soldier (leads 1), 2 Corporal (5), 3 Serjeant (20), 4 Captain (100), 5 Major (500), 6 Colonel (1,000), 7 Marshal (3,000), 8 Grand Marshal (10,000). Ranks 5–8 are officers.
`/pve job [job]`	Shows your job in battle, or sets it: `cavalry`, `footman`, `archer`, `shieldman`, `heavy_infantry`.
`/pve role [role]`	Shows your battle role, or sets it: `bait`, `support`, `frontline`, `flanker`, `kill_squad`.
`/pve noble <player> <true|false>`	For testing: gives a player a knighthood without earning it, or takes it away. A noble enlists at a recruitment post as a Major (rank 5). A player who holds land keeps their county.
`/council <topic>`	Makes a choice at the war council during a battle. You normally click these in chat rather than typing them.

Factions and places

`/pve faction list`	Lists every faction, nearest spawn first: type, zone, origin, distance from spawn, claim radius and strength.
`/pve faction info nearest` `/pve faction info <name>`	Details of the nearest faction or a named one: origin, zone, claims, strength, food stockpile, banner, and how many places (POIs) it owns.
`/pve poi list [radius]`	Lists the places of interest within the radius (500 blocks by default, up to 30,000), nearest first, with owner and whether each has been generated. Shows at most 150.

Test battles

`/pve debug battle`	Starts a battle 45 blocks in front of you between the two factions nearest you, 100 soldiers each, lined up across your view. The armies deploy first; place them on the battle map (link in chat) or start at once.
`/pve debug battle <first> <second>` `/pve debug battle <first> <firstSoldiers> <second> <secondSoldiers>`	The same between two named factions, 100 each or with the numbers given (in blocks of 20).
`/pve debug battle start`	Starts the fighting once the armies have deployed.
`/pve debug battle end general <0|1>`	Ends the day's battle at once: that side's general falls and its army retreats. Side 0 is the first army, 1 the second.

`/pve debug battle end surrender <0|1>`	Ends the day's battle at once with that side's surrender.
`/pve debug battle clear`	Stops the battle and clears it away: soldiers, camps and all.
`/pve debug battle livecap [soldiers]`	Shows, or sets (0–10,000), how many battle soldiers may exist as real entities at once. The rest fight as numbers.
`/pve debug battle watch <x> <z>` `/pve debug battle watch clear`	Treats a spot as if a player stood there, so the soldiers near it become real (for testing without a player there). `clear` removes it.
`/pve debug battle simulate <first> <firstSoldiers> <second> <secondSoldiers>`	Works out a whole battle as numbers only, with nothing spawned, and reports the winner, time taken, survivors, reliefs and whether the generals lived.

Other debugging

`/pve debug advance <days>`	Runs the economy's daily tick that many times (1–100,000). The in-game clock does not change.
`/pve debug recruits`	Lists the factions this mod registered with Villager Recruits, as Recruits sees them: id, leader, colour, banner.
`/pve debug cityterrain`	Prints the terrain plan of the city nearest you.
`/pve debug column <x> <z>`	Prints the ground height at a column (the top solid block, ignoring leaves and plants). Loads the chunk if needed.
`/pve debug citystats [samples]`	Generates sample cities (12 by default, up to 200) in the background and writes their statistics to the game log.

Not commands, but useful

World map: double-click a capital	Opens the nation screen. Double-clicking a sword sanctum opens its organization screen.
World map: right-click a place (creative)	Opens a menu with the option to teleport there.
Muster bar	Members of a nation whose army is mustering see a bar at the top of the screen: where it musters and the time left before it marches.
